

ACP-1000-CT Edgeless Media Control Tablet

THE ONE TABLET THAT UNIFIES ALL THE CONTROL

Product Highlights

Arrive's transformational technology architecture called "EdgelessMedia®" is based on the reality that in the cloud connected world, devices perform extended functions which are not limited to the geometry of the box, nor within the physically defined schematic connectivity of the box. Instead, devices also function as gateways to the whole wide world by performing functions that are "outside the box". Arrive's EdgelessMedia® concept follows the tenet of "Formless Function" and significantly reduces the problem of equipment and cable sprawl which is inherent in the physical installation environments.

Arrive ControlPoint™ is a powerful unified control interface. The 10.1" Tablet with integrated Arrive ControlPoint™ software seamlessly connects to Arrive® products like Arrive RoomPoint™ or Arrive FacePoint® or Arrive ViewPoint™ Appliance to provide unobtrusive control of UI functions over both software and hardware.

Arrive ControlPoint™ - Application Software running on the ControlPoint™ 1000, linked to Arrive Edgeless Media Server (EMS), a Management Resource Platform, readily provides the experience of Lync™ meeting and full room control management. Control Point™ 1000 is typically placed on the meeting room table and enables meeting organizers and participants to interact with buttons and other controls.

- ▶ Allows the user to create a meeting for a current or later date.
- ▶ Allows to add the participants to join through the Microsoft® Lync™ 2013 client.
- ▶ Imports the rich collaboration features of Microsoft® Lync™ to the meeting and conference rooms.
- ▶ Enhances employee productivity, empowers remote workers and reduces communication costs.
- ▶ Enables individuals, teams and communities to work together in a rich, integrated multimedia experience from the meeting room to anywhere, anyone and anytime connections.
- ▶ Accommodates a face-to-face interaction without travel, and enable effective collaboration.
